My Knowledge Check Result

Course Outline:

- Module 1: Introduction to Cybersecurity (100%)
 - 1.1. The World of Cybersecurity (10 / 10)
 - 1.2. Organizational Data (6 / 6)
 - 1.3. What Was Taken? (7 / 7)
 - 1.4. Cyber Attackers (4 / 4)
 - 1.5. Cyberwarfare (2 / 2)
 - 1.6. Quiz**
- Module 2: Attacks, Concepts and Techniques (0%)
- Module 3: Protecting your Data and Privacy
- Module 4: Protecting the Organization
- Module 5: Will Your Future Be in Cybersecurity?

Quiz Results:
 You have scored **100%**.
 Congratulations, you have passed the exam.

Activity 3: Course Completion & Certificates

This certificate is presented to

Qi Liu

for the completion of

Cyber Investigator: An Interactive Cybersecurity Experience

(PLAN-A273AA80C96E)

According to the Your Learning Builder - Plans system of record

Completion date: 20 Apr 2026 (GMT)

Activity 4: Course-Based Questions

1. What is cybersecurity and why is it important?

Cybersecurity is the act of keeping computers, networks, and data safe from attacks or people who shouldn't be able to get to them.

It is crucial because it protects systems, money, and personal information from hackers.

2. Identify and explain three common types of cyber threats.

A virus is a bad program that spreads and damages files.

Phishing is when fake messages trick people into giving out personal information.

Hacking is getting into systems to steal or change data.

3. What is the CIA Triad (Confidentiality, Integrity, Availability)?

Confidentiality means keeping data secret from people who shouldn't see.

Integrity means making sure that data is accurate and not changed.

Availability means making sure that systems and data are available when needed.

4. What is malware? Give two examples.

Malware is bad software that is made to steal or damage data.

For example:

Virus.

Ransomware that locks your files and asks for money.

5. Explain phishing and how users can protect themselves.

Phishing is when hackers send fake emails or messages to get people to give them their passwords or other personal information.

Don't click on links that look fishy, be aware of the sender and make sure passwords are strong enough.

6. What is the role of a cyber investigator?

A cyber investigator knows how a cyber attack could happen, gathers proof, and helps catch the attacker.

7. What steps are involved in investigating a cyber incident?

1. Figure out what the problem is
2. Get proof
3. Check the data
4. Find out what caused it
5. Tell us what happened and write it into report

8. What types of digital evidence are used in cybersecurity investigations?

- Log files which records what happened.
- Text messages
- Documents and files
- Data about networks

9. What skills are required to become a cybersecurity professional?

- Ability to solve problems
- Paying attention to details
- Knowledge of networks and security
- Basic commands to server or SQL commands

10. What did you learn from the interactive investigation experience?

I learned how to find clues, look at digital evidence like log files and text messages. And eventually I figured out how cyber attacks happen (like Phishing email, DDoS attack and SQL Injection) and how to stop them.
